COVID-19 RESPONSE FOR BUSINESS

Keep your staff, customers and community safe.

At Push, we’re doing our part to help keep communities healthy and safe. In response to the COVID-19 pandemic, we’ve re-developed our feature set to better assist businesses in combating the spread of the virus. The financial impact of a closed business can affect many individuals and we want to help business owners stay open without having to worry about jeopardizing the health of themselves, their employees and others.

NEW

Contactless Temperature Record
Store all records of the contactless temperature reader in each employee’s profile in Push. Set up notifications to track when an employee’s temperature increases over time.

Paperless Onboarding
Allow new employees to onboard themselves from home and spend more time introducing them to your business. Centralize and store employee information or training documents on a secure cloud-based platform to ensure employees are set up for success.

Leave Management
Track sick days with flexible and customizable balances for sick leave types. Grant employees more transparency as to what’s available to them so when time off is requested and approved, it’s automatically calculated and streamlined into payroll.

NEW

Clock in Health Questionnaire
Create customizable health questionnaires for employees to fill out during clock in and clock out. Analyze the responses as soon as they’re submitted with an easy to read report.

Effective Communication Tools
Set up custom clock in messages to notify employees about new health or policy updates. Use our messaging portal to send company-wide communications to staff across different locations. In the event that one of your staff tests positive for COVID-19, view which employees worked the same shifts, and message them within the app to self-monitor.

Clock in Messages
Employees can message managers, book time off, view pay stubs and even clock in and out, all from their own device. Create location-based geo-tagging rules to ensure that employees can only clock in when on-premise.

Disclaimer: The features above are to assist with the prevention of the spread of COVID-19. Temperature readings can be an indicator of fever, which is a symptom of COVID-19, though it does not mean an employee has contracted COVID-19. If employees are experiencing symptoms, it is best to seek out guidance and advice from the government, medical, and healthcare providers.

How it Works:

1. Connect a temperature reader device (FLIR Systems) to the bottom or next to your iPad.

2. Set up any custom health questions on the back end. Any employee that clocks in will need to enter their information before successfully clocking in.

3. Track temperature on the employee’s record, set up a notification to managers if there are any drastic changes over time.

4. In the event an employee tests positive for COVID-19, you can view all employee shifts to notify any staff who may have worked at the same time.

WHAT IS PUSH OPERATIONS?

Labor Management, Simplified.

Push Operations is cloud-based employee labor management software that integrates your HR, payroll, time tracking and scheduling tasks into one easy-to-use platform.

From onboarding to career growth, management, payroll and business intelligence, Push takes care of an employee’s journey with your business on one simple platform.
